Connectivity
The Invisible Thread that Links our World

Connectivity is the backbone of digital transformation

Every news update, every notification, every call, every file sent, every page visited, every key pressed is reliant on an infrastructure that connects users with devices and content.

KDDI TELEHOUSE

The Foundation for Today's Digital Era

- For more than 30 years Telehouse has provided the infrastructure to create connections that support our daily lives
- Smartphones have transformed our lives – our data centres ensure the safe delivery and storage of data
- The Covid-19 global pandemic firmly positioned data centres as cornerstones of the digital world.

Supporting the Connected Future

- Increased data generation and demand for connectivity will only continue
- Data centres provide a reliable, low latency connected environment to meet the demands of IoT devices such as connected cars and Generative AI

Overcoming the Digital Divide

- Empowering developing countries through digital infrastructure
- Adapting to evolving societal values
- Eliminating the digital divide
- Sharing experience to foster digital growth.
